Professional Summary

Junior Full Stack Developer transitioning from Electronics to Software Engineering, with practical experience building backend services, REST APIs, automation workflows, and full stack applications using Python, TypeScript, Node.js, React, PostgreSQL, and Linux environments. Currently pursuing a Software Development degree at BYU–Idaho.

Strong self-directed learning mindset with hands-on experience in Docker, CI/CD fundamentals, Git workflows, API integrations, and cloud deployments. Passionate about backend engineering, distributed systems, data-driven platforms, developer tooling, and solving complex technical problems through scalable software solutions.

Technical Skills

Languages	Python, TypeScript, JavaScript (ES6+), SQL, C#, C++
Backend	Node.js, Express, REST APIs, Authentication, API Integrations
Frontend	React, HTML, CSS, Responsive UI Development
Databases	PostgreSQL, MongoDB
DevOps & Infrastructure	Linux, Docker, Git, GitHub Actions, CI/CD fundamentals
Architecture & Concepts	Clean Architecture, DDD concepts, OOP, automation workflows

Professional Experience

Junior Developer — Academic & Personal Projects (BYU–Idaho) | Jul 2024 – Present

- Developed backend APIs and full stack applications using Node.js, TypeScript, React, PostgreSQL, and MongoDB.
- Built and deployed containerized applications using Docker and GitHub-based workflows.
- Implemented authentication flows, CRUD operations, API integrations, and responsive frontend interfaces.
- Worked with Linux-based environments and Git version control throughout development workflows.
- Created and maintained personal and academic projects focused on backend engineering, APIs, and automation concepts.

Electronic Technician — Perto S.A. | Jul 2021 – Aug 2025

- Resolved 200+ technical incidents involving complex electronic systems, reducing average repair time by approximately 30%.

- Applied structured troubleshooting, root-cause analysis, and documentation practices transferable to software debugging and infrastructure support.
- Collaborated with multidisciplinary teams while maintaining process consistency, technical reporting, and operational reliability.

Selected Projects

Philomedia — Full Stack platform integrating philosophy quotes with movies and series using external APIs, dynamic search features, and responsive frontend architecture.

Library API — Backend-focused API project demonstrating RESTful architecture, database integration, routing, authentication concepts, and scalable service organization.

Handcrafted Haven — Responsive e-commerce-style application focused on frontend usability, component organization, and full stack integration concepts.

Education

Bachelor's Degree — Software Development

BYU–Idaho | 2024 – Present

Technical Degree — Electronics

Fundação Bradesco | Completed 2021

Additional Information

- Strong interest in backend systems, data engineering, automation, Linux environments, and scalable infrastructure.
- Comfortable working in remote and async environments with Git-based collaboration workflows.
- Fluent in Portuguese and intermediate English communication skills.
